

CO2 Post-Procedure Instructions: Eyes

Cleanse areas twice daily with SkinCeuticals Gentle Cleanser or a mild cleanser such as Cetaphil or Cerave (over the counter).

Apply Hydra Balm ointment twice daily for 2-3 days and as needed.

Micro-peeling and scabbing may occur but is only temporary and will last from 2-7 days depending on the size of area treated.

For larger areas (except eyes): On 3rd night, cleanse and treat area with gauze soaked in $\frac{1}{2}$ white vinegar and $\frac{1}{2}$ warm water (total $\frac{1}{4}$ cup of each). Leave on for 5-10 minutes and wash off. Next morning after cleansing the area, pass a cotton ball with witch hazel or SkinCeuticals Gentle Toner over area to clean off dead skin accumulation. Moisturize afterward.

Continue to take Acyclovir for 5 more days and Keflex for one week.

For eye treatment, expect swelling and inflammation that will last from 2-4 days.

Return in 4 weeks for follow-up.

Sunblock must be worn constantly when outdoors.
